

Telecom Industry Veteran Launches Company to Help Businesses Transition to Voice Over IP

Yorktown Heights, New York, March 28, 2008- Telecom and VOIP Industry veteran Tom Cerabona has formed Kinetech Voice Technologies to assist companies in transitioning to VOIP based communications.

“The new generation of Business Grade Hosted Voice Over IP brings new communications functionality, such as multiple location and mobile worker support, find me/ follow me service, and business continuity, that can help Small to Mid-Size Businesses to be more efficient and successful, while reducing monthly operating expenses and capital equipment costs,” notes Cerabona. “Business owners do not have the time to compare features, quality and reliability from hundreds of VOIP suppliers. We work with these businesses as a trusted adviser to determine, recommend, and implement the best solution for their business.”

About Kinetech Voice Technologies

KINETECH Voice Technologies provides consulting, selection, and implementation of Voice Over IP technologies and business telephone systems to Small to Mid Size Businesses to satisfy their current and future business communications needs. Kinetech’s services include current system analysis, architecture, design, equipment and service provider selection, installation, test, and ongoing support.
