

Video Conferencing and TelePresence Solutions

Kinetechnology Voice Technologies specializes in providing Video Conferencing and TelePresence Systems.

Video Conferencing is a better way to do business and an ideal way to collaborate with clients, customers, and employees. Conduct meetings, project reviews, and interviews by moving away from impersonal conference calls and exhausting travel. Enjoy HD quality video and easy-to-use features across low bandwidth environments- without sacrificing audio and video quality- at a price every business can afford!

Transform the way you communicate with your clients by replacing everyday calls with face-to-face interactions, life-like images, and distortion free sound. The experience of meeting people across the globe using the latest in telecommunication technology, yet feeling as if they were present across the table, is Video Conferencing.

TYPICAL APPLICATIONS INCLUDE

- **Client Project Reviews**
- **Weekly Meetings with Off Site Personnel**
- **Product Development**
- **Project Management**
- **Pre and Post Sales Customer Meetings**
- **Technical Support**
- **Conferences**
- **Webinars**
- **Broadcasts**
- **Instruction and Distance Learning**
- **Training Sessions**
- **Conducting Interviews**

Video Conferencing is ideal for headquarters and remote offices, home offices, individual practices, employee conferences, remote workers, and even the CEO's suite. It provides you the flexibility to work in your own environment while still making it to those important meetings across the country, avoiding jet lag and those delayed and cancelled flights.

Your staff will appreciate the ease of collaboration, and you will enjoy the increased productivity and profitability of teams working in unison. Increase the quality and

effectiveness of your company's communication with your clients whether they are across town, across the country, or around the globe.

Our solution provides HD Quality multi party video conferencing and collaboration, PC video clients for the mobile worker, PC desktop and application sharing, and recording of conference sessions- all with a simple instant messenger-like user interface and wireless system controls. It also provides an excellent platform for events or large numbers of participants in a web conference.

With our technology there is no need to purchase special lines or to increase your Internet bandwidth, as it works with most existing Internet connections. Enjoy high definition video conferencing utilizing the public internet with low bandwidth requirements.

Soon, you won't be meeting your CFO in Chicago, lawyer in Florida, or clients in New York. You'll be viewing them right across the table while never leaving the office or stepping foot in an airport. Video Conferencing is the new way to communicate and collaborate.

Solution Benefits:
